Work Rights: Full working rights in Australia

PROFESSIONAL SUMMARY

RMIT Computer Science graduate based in Melbourne with a comprehensive, hands-on technical foundation spanning software development, cloud infrastructure, SQL-backed applications, and enterprise IT support. Internship experience encompasses full-stack application development, CI/CD pipeline management, systematic troubleshooting, and technical documentation. Complemented by strong customer-facing experience that cultivates a service-first mindset, clear stakeholder communication, and rapid issue resolution. Highly adaptable and actively seeking graduate or junior roles across software development, application support, service desk, business systems analysis, and cloud operations.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL, C++, C, C# (Fundamentals)

Application Support: Troubleshooting, Incident Investigation, User Support, Technical Documentation, System Handover, Business Applications

Frontend: React, HTML, CSS, Tailwind CSS, Vite, Responsive UI

Backend & APIs: REST APIs, Java/Spring Boot, JSON, Authentication Concepts, API Integration

Databases: SQL, Relational Database Design, SQL Server Concepts, MySQL, PostgreSQL Concepts, DynamoDB

Cloud & DevOps: AWS Lambda, API Gateway, S3, DynamoDB, EC2, Docker, Kubernetes (Exposure), GitHub Actions, CI/CD Concepts, Linux

Tools & Practices: Git, GitHub, Postman, Jira (Concepts), Microsoft 365, Agile Delivery, Unit/Integration Testing

PROFESSIONAL EXPERIENCE

DevOps & Cloud Engineering Intern

Feb 2025 – Jun 2025

Staffinity Technologies GmbH

Melbourne, VIC

- Supported cloud-native workflows across Linux environments, Docker containerization, Kubernetes (exposure), and CI/CD pipelines.
- Worked closely with GitHub Actions and FluxCD/GitOps concepts to streamline release processes, draft deployment documentation, and enforce system reliability practices.
- Managed, executed, and documented over 40 unit and integration tests, achieving a 100% pass rate to ensure deployment stability.
- Supported daily operational readiness by assisting in troubleshooting, monitoring delivery quality, and maintaining technical documentation for the wider engineering team.

Full Stack Developer Intern

Nov 2024 – Feb 2025

International Film Festival of Australia

Melbourne, VIC

- Developed and enhanced React-based components to support core business operations, including film submission, scheduling, and digital content workflows.
- Actively participated in Agile delivery cycles, contributing to user testing, systematic debugging, code reviews, and the creation of technical guides.
- Optimized frontend architecture, improving page load times by approximately 40% and significantly boosting mobile user retention.
- Bridged the gap between technical and business domains by translating stakeholder and user feedback into practical, reliable platform improvements.
- Documented all system changes comprehensively, supporting a smooth handover process to ensure long-term maintainability by support teams.

Software Engineer Intern

Wonder Electricals Limited

Jul 2022 – Sep 2022

New Delhi, India

- Assisted the engineering team with C++ / embedded software exposure, reinforcing core software engineering and algorithmic fundamentals.
- Supported daily development operations through bug fixing, strict version control adherence, and structured software development practices.
- Communicated technical updates efficiently to team leads and contributed to overall code quality and documentation improvements.

TECHNICAL PROJECTS

Event Management Platform | *React, Java/Spring Boot, SQL, REST APIs, Docker* Full-Stack App

- Engineered a full-stack business workflow application designed to handle end-to-end event creation, digital registration, and complex user management.
- Implemented robust SQL-backed database logic, RESTful APIs, modern authentication concepts, and comprehensive testing documentation.

Cloud Music Subscription Platform | *AWS Lambda, API Gateway, S3, DynamoDB, EC2* Cloud System

- Developed a cloud-native subscription platform integrating secure authentication, automated API workflows, and scalable cloud data storage.
- Effectively demonstrates an understanding of AWS ecosystems, third-party integrations, serverless architectures, and reliable digital systems.

NLP Analytics Dashboard | *Python, pandas, VADER, BERTopic, NRCLex* Data & Reporting

- Processed, cleaned, and analyzed a massive dataset comprising over 125,000 distinct data points.
- Designed an interactive dashboard generating actionable insights through advanced sentiment analysis and topic modeling techniques.

AI Business FAQ Assistant Prototype | *React, Tailwind CSS, AI APIs, JSON* Prototype App

- Prototyped a responsive customer support assistant aimed at automating FAQs and capturing business leads.
- Highlights a strong understanding of business information workflows, digital self-service solutions, and clean frontend delivery.

Core Computer Science Projects | *C/C++, POSIX threads, Bash, Make, Valgrind* University

- **Memory Allocation Simulator:** Built custom memory management tools, heavily utilizing linked lists, rigorous testing, and memory leak debugging.
- **Multithreaded File Copier:** Handled advanced concurrency mechanisms including mutexes and condition variables, ensuring execution reliability.

EDUCATION

Bachelor of Computer Science (Major: Advanced Computer Science) Completed: Dec 2025

RMIT University

Melbourne, VIC

ADDITIONAL EXPERIENCE

Customer Service & Operations

Domino's Pizza

Aug 2023 – Dec 2025

Melbourne, VIC

- Balanced part-time operational duties while completing a rigorous Computer Science degree, developing exceptional customer-facing communication, reliability, and issue resolution skills.
- Operated POS systems, managed rapid customer inquiries, collaborated seamlessly with team members, and maintained composure under high-pressure environments. Skills highly transferable to IT Service Desk and Application Support roles.
